### DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

Applicant's amendment filed on 11/08/04 has been fully considered and they are persuasive.

Referring to new claims 1, 13, 14, 44 and 46, the applicant argues that Duncan reference (U.S. Patent 6,597,394) fail to disclose, teach or suggest that latches 640-643 are used "alternately" for fetching input image data and /or latches 646-647 are used "alternately" for storing output image data. The examiner agrees.

The prior art does not teach or fairly suggest an image transform processor for processing image data, comprising: a programmable arithmetic processor capable of receipt of the image data from a data source over a data path and processing the digital image data, the programmable arithmetic processor comprising a first set of local buffers and a second set of local buffers, each buffer in the first set of local buffers alternately used for fetching input image data and each buffer in the second set of local buffers alternately used for storing output image data; and a programmable input addresser that controls transfer of the image data from the data source to the programmable arithmetic processor by providing a source address onto a source address path, the source address identifying the data source. .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
